

Digger's Delight Flower & Garden Mulch

FROM PENICK ORGANICS

Flower & Garden Mulch helps plants grow larger and healthier with more blooms.

THE FLOWER & GARDEN MULCH DIFFERENCE

Digger's Delight Flower & Garden Mulch, a Penick exclusive, is nitrogen stabilized mulch specifically designed for mulching annual beds. Nitrogen stabilization means that the mulch has the nitrogen it needs to break down without robbing it from plants. At the end of the season it can be tilled into the bed as a soil conditioner.

"The Flower & Garden Mulch makes a big difference in the size and health of our plants. The color lasts a long time and always looks good."

A Flower & Garden Mulch user since 2002
